

Projecticon PKS

Project Knowledge Support

Project Knowledge Support –PKS

...an easy to use knowledge support for all kinds of projects and work-flows in any kind of environment available on Internet/ Intranet.

Projecticon-PKS is based on input from thousands of eager project co-workers, project leaders, sponsors and managers who has participated in our seminars and courses but also on more than 20 years of experience from development and establishment of project models such as PROPS, PRIME, PROPER, PUSCH, AlfaPro.

With Projecticon PKS anyone working in a project will always have access to an updated support.

PKS gives the opportunity to get better goal-fulfilment, better cooperation and to build a common culture around a specific project or workflow.

The whole organisation concerned:

- Are using the same vocabulary and the same terminology
- Uses projects as a natural form for cooperation towards a common goal
- Has the same apprehension of the work-flow and the documents to use
- Are focused on the same goal and will achieve it

The basic elements to establish a common culture are easily available in PKS.

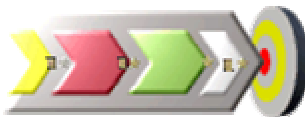

PKS Overview

PKS is build around a graphical user interface where every element contains a general support both from a conceptual point of view and in a specific situation.

The presented elements beneath can be the building blocks when establishing a common culture and through the entire work-flow.

There are two different flow descriptions one more simplified and one advanced. These can easily be adapted to customer needs.

The flows consists of different symbols that represents a specific situation and contains relevant information and templates, checklists etc

It is just to identify the specific situation in the flow from an overall view down to acquired level of details.

The Knowledge

In the defined situation you have access to all the knowledge that has been defined and put into the system such as:

- descriptions
- Templates
- Checklists
- tips & advice
- examples

PKS is available as an online tool, or as an internal intranet solution.

When adapted as an Intranet support PKS can be adjusted to existing project model or work-flows already in place.

Projecticon

The business idea of Projecticon is to help companies and organizations to reach pre-decided expectations when handling projects. We wish to contribute to a successful project implementation and project completing within given time- and cost-frames.

Focus is on Goal formulation where we also insist in formulating the most important: the lasting, measurable effects of the project.

The basis for our services is the professional experience of our personnel as well as our well-documented and structured project model, the Projecticon Model. Our offer consists of support and development within project management on three levels:

For the organization in the form of a general, shared and functional project model, which gives the organization a structured work method to handle and manage change

For the project by providing active support during project start-ups, continuously through-out the project and during the project conclusion

For the individual by developing each person's own proficiency in project skills

Project philosophy

For projects to be successful they must be thoroughly prepared. This means that a broad commitment is needed and that time necessary to obtain real results is allowed. The right project start is key. It is essential to a successful goal fulfillment, reduces the consumption of resources and shortens the project lead time.

The goal formulation is the main steering instrument. The goal is expressed as the sustainable result that the project shall lead to. The goal must be challenging, reachable and measurable.

We summarize our project philosophy in three words:

- Simplicity** allows for all parties to rapidly comprehend the project's contents.
- Clarity** creates consensus, understanding and acceptance of the project goals and methods.
- Courage** is about the ability to make decisions and have the moral strength to question things in time, and the courage to measure.
